

Product Engineer

You are looking to join an agile, dynamic, and motivated team in the artificial intelligence (AI) and robotic technologies industry. Marine Thinking partners with businesses across Atlantic Canada marine industries, advancing and improving processing factories' workflow, work efficiency, and driving higher production efficiency. Our technology at Marine Thinking aims to protect the environment and strengthen the sustainable development of the marine industry.

We are looking for motivated, energetic and talented people to join our Product Development team in Halifax.

ROLE AND RESPONSIBILITIES

As product manager, you'll collaborate closely with our amazing engineering team, operation specialists, marketing team, and other stakeholders to build out our top-notch automotive products. You'll also interact and meet with our customers to assess market needs and interpret them in geeky languages. If you have the technical skills and experience to be an outstanding product manager, we want to hear from you.

Your core responsibilities:

- Guide product development from inception to sale
- Interact with customers, sales, consulting, support, and other stakeholders to identify the highest value investments we can make in our products
- Work closely with our software and hardware teams to define new features
- Collaborate with engineers to maintain sprint backlogs and support our sprint process with planning, shoulder surfs, and reviews
- predict production costs and prices for future products to make sure that they'll be profitable, and ensure new products fit with the company's brand.
- Make sure new and existing products follow applicable laws and regulations
- Assist in rollouts by delivering/overseeing webinars, training, documentation, and other release artifacts
- Participate in product marketing team activities to brag about our awesome creations!

QUALIFICATIONS AND EDUCATION REQUIREMENTS

- BA/BS degree, preferably in some geeky realm... but we've seen a coder with a jazz degree nailing it, so if you think you've got what it takes, we're open-minded
- 3+ years practicing product management or similar product role
- 2+ years in software/hardware development or similar technical role building technologies
- You don't hesitate to open Postman or write a few lines of JavaScript to verify the behaviors of a new API call

- Experience working in a DevOps-savvy environment
- Excellent communication skills, in both written and verbal – you love interacting with users to identify the features they need
- Desire! – for frequent customer interaction, including occasional travel
- Outstanding attention to detail
- Working understanding of modern incident management, IT monitoring, & DevOps/SRE

PREFERRED SKILLS

1. Automation, Mechanical, Electrical or Electronic Engineering
2. Scrum certification
3. Pragmatic Marketing training

If you are interested in the latest tools and technologies; If you are enthusiastic about taking on new challenges as we continue to push our technology forward, come and join our highly skilled and growing team! Please send your resume to hr@marinethinking.com

We thank all applicants for their interest, but only those selected for an interview will be contacted.
